

## **ISOROOF SBS**

WPBIT0040.b

#### **DESCRIPTION**

ISOROOF SBS is a elastomeric modified bitumen waterproofing membrane (SBS), industrially manufactured by impregnation of the reinforcement with the waterproofing compound based on distilled bitumen modified with elastomeric polymers, which gives to the compound high technical characteristics.

The composite reinforcement, made of nonwoven polyester in combination with fiberglass, conveys good mechanical characteristics, excellent dimensional stability and elastic performance. Shaping of sheets, straightness, dimensional and surface uniformity are accomplished by hot calendering of the mass at hot melt fluid state.

The upper surface is coated with anti-adhesive amorphous sand. The lower surface is coated with a thermo-fusibile polyolefin film.

#### FIELD OF APPLICATION

ISOROOF SBS is particularly suitable as under layer and as intermediate layer in multi-layer waterproofing systems, with all membranes types; it is very appropriate where the substrate undergoes significant and frequent movements.

General roofing, vehicles parking roofs, foundations, on or under floors or ground slabs, wall constructions, are valid examples of the design application of this product. It is not suitable for roof gardens. It can be applied onto every substrate (concrete, masonry, corrugated steel decks, tension structures, pre-cast concrete roofs, wood, insulation panel, membrane, etc.) and under heavy protection.

The mechanical characteristics and high level thermo-dynamic stability make it suitable for any climate conditions, particularly cold climates, and all the situations where a barrier against water is required.

### METHOD OF INSTALLATION

The excellent thermoplastic properties of the waterproofing compound allow the application with torchon system or hot air generator. In particular situations, it could be applied with appropriate sealants. The application of the membrane must be carried in good weather conditions and after the substrate has been adequately cleaned and prepared.

### PACKING AND STORAGE

The product is packed as standing rolls on wooden pallets wrapped with thermoshrinking protective hoods. Rolls must be stored in the upright position, without stacking the pallets to avoid deformations which can compromise the correct application of the membrane. The product must be stored indoor, protected from heat and frost.

### INTENDED USE OR USES

Flexible sheets for waterproofing. Reinforced bitumen sheets for roof waterproofing

Flexible sheets for waterproofing. Bitumen damp proof sheets including bitumen basement tanking sheets

Flexible sheets for waterproofing. Bitumen water vapour control layers

- 1. Anti-adhesive surface
- 2. Waterproofing mass
- 3. Reinforcement
- 4. Waterproofing mass
- 5. Torch-off film
