

**CIVIL
ENGINEERING**
SOLUTION

MINI-MAMMOUTH

THE +

+ High quality of welding

The uniform heating system and the pressure roller present in the machine will provide a better and uniform quality welding as shown on the thermostatic test.

+ Economical

The machine has been simplified to reduce cost and provide an easier maintenance. The **Mini-Mammouth** will achieve great yields with a reduced operational team on site.

+ Ecological

The enclosed heating system reduces the overall gas consumption. The kinetic energy used is electrical, with a considerable noise reduction.

+ Safety

The requirements in terms of regulation have been checked by the French independent body APAVE. Different safety systems are installed in the machine allowing an emergency stop in the event of an operative fall.

Mini-Mammouth

MINI-MAMMOUTH: THE LATEST GENERATION

- + Light and flexible
- + Secure
- + Easy to use and maintain

CHARACTERISTICS

- **Weight:** 265 kg
- **Dimensions:**
 - L: 1.85 m
 - W: 1.20 m
 - H: 1.50 m

Placing the roll.

Adjusting the roll.

Automated installation with Mini-Mammouth

AUTOMATED INSTALLATION

SOPREMA has been developing bituminous membranes with an automated installation system since 1998 to provide its clients with an alternative solution to overcome projects of all sizes, while maintaining excellent quality, speed and safety on site. The **Mini-Mammouth** is able to install all types of **SOPREMA's** full welded bituminous membranes (SBS or APP).

The **Mini-Mammouth** provides an enclosed heating system that gives uniformity on the welding throughout the membrane, regardless of the temperature. The soft pressure roller on the machine provides a perfect bonding for all types of substrate. With a compact dimension and weight, the **Mini-Mammouth** can be easily transported in a van. No trailer is required.

Operational Team: Normally the operation team is made with an operator trained specifically for the **Mini-Mammouth** and two additional personnel. One will be responsible for the loading trolley and the others will be completing the overlaps welding and details.

Please refer to the Installation guide for a correct installation.

OTHER ACCESSORIES AVAILABLE

Box for machine storage on site.

Trolley to move and load rolls.

Trolley to move bottles/generator.
